San Andres, Catanduanes, 4810 | 09955950747 | aquinovern0@gmail.com

Education

Catanduanes State University - College of Information Technology

Graduated: June 24, 2026

Bachelor of Science in Information Technology

Relevant Coursework: Web Development, Data Structure & Algorithms, Database Systems

Experience

Freelance Web Developer

August 2024 - December 2024

- Designed and developed a full-stack web application using React.js, Node.js, Express.js, and MySQL.
- Built secure authentication and role-based access control for user management.
- Translated client requirements into functional features, handling both frontend UI/UX and backend logic.
- Managed database schema design and API integration to ensure data consistency and performance.
- Delivered the project independently and on schedule, demonstrating strong ownership and time management.

Projects

Grades Repository System - Academic Information System

- Designed and developed a centralized academic records management system for students, faculty, and administrators.
- Enabled students to securely view grades across multiple semesters with role-based access control.
- Implemented faculty workflows to assign, update, and manage grades efficiently.
- Developed RESTful APIs and optimized database queries to ensure scalability and performance.

CICT Project Gate - A Centralized Platform for Managing Capstone Title Submission and Review

- Built a thesis and capstone title submission and approval system with automatic similarity detection to prevent duplicate or highly related topics.
- Integrated GPT-4 as a Decision Support System (DSS) to recommend and refine project title suggestions. Implemented vector embeddings and cosine similarity for intelligent text comparison and plagiarism-like detection.
- Designed a role-based access system allowing students to submit titles, faculty to review and comment, and admins to manage users and system settings.

Skills

Languages: TypeScript, JavaScript, SQL

Frontend: React.js, Next.js, Tailwind CSS, HTML5, CSS3 **Backend:**

Node.js, Express.js, RESTful APIs

Databases & ORM: MySQL, Prisma

Tools & Practices: Git, GitHub, JWT Authentication, Role-Based Access Control (RBAC)
