EXPERIENCE

Frontend Developer Intern • OpalusPH

Feb 2026 – May 2026

Philippines

- Built assigned sections of two company websites in Next.js, turning handed-over designs into working, responsive pages.
- Delivered frontend work inside an existing team, implementing the team's designs and matching an established codebase's conventions.

Web Developer • Freelance

Aug 2024 – Present

Catanduanes, Philippines

- Delivered a full-stack web application solo and on schedule, owning it from database schema through to the interface.
- Shipped authentication with role-based access control, so each type of user reached only the data they were entitled to.
- Turned client requirements directly into working features, with no separate spec hand-off between design and build.
- Designed the database schema and the API contract together, which kept data consistent as features were added on top.

PROJECTS

CICT Project Gate

2026

Capstone title submission and review platform • GPT-4, vector embeddings

- Built a capstone title submission and approval system with automatic similarity detection, warning students about duplicate or closely related topics at the point of submission rather than after review.
- Integrated GPT-4 as a decision support system that recommends and refines project title suggestions.
- Implemented vector embeddings with cosine similarity for text comparison, surfacing near-duplicates that exact-match search misses.
- Designed a three-role access system: students submit titles, faculty review and comment, administrators manage users and settings.

PresyoSerbisyo

2026

Price monitoring for DTI Catanduanes • Next.js, React, TypeScript, Node.js, Express, Prisma, PostgreSQL

- Built a commodity price monitoring platform replacing DTI's paper forms, with field price capture, automatic compliance checks and a public price transparency page.
- Delivered all 71 planned features across eight phases, deployed against a live PostgreSQL database with 132 automated tests passing.
- Computed Suggested Retail Price comparison at write time, so compliance status is derived once and never redefined per screen.
- Enforced two-layer authorization: route-level role guards plus per-module scope helpers controlling whose records each officer can see.

Grades Repository System

2025

Academic information system • RESTful APIs

- Built a centralized academic records system serving students, faculty and administrators from one source of grade data.
- Enabled students to view grades across multiple semesters behind role-based access control.
- Implemented faculty workflows to assign, update and manage grades.
- Developed RESTful APIs and optimized database queries to keep response times stable as records accumulated.

EDUCATION

BS Information Technology • Catanduanes State University

2022 – Jun 2026

College of Information Technology • Coursework: Web Development, Data Structures & Algorithms, Database Systems

SKILLS

Languages: TypeScript, JavaScript, SQL, HTML5, CSS3

Frontend: React.js, Next.js, Tailwind CSS

Backend: Node.js, Express.js, RESTful APIs

Databases: MySQL, PostgreSQL, Prisma

Practices: Git & GitHub, authentication & authorization, role-based access control
